

Research platform - Passages

The research platform is a collective body of thought which enables the determination, elaboration and setting up of academic studies through research in education.

This teaching is structured by three major elements :

- > the thesis produced in the 4th and 5th years ;
- > the research and creation workshops (ateliers de recherche et de création - ARC) ;
- > the school's research projects.

The research platform is constituted of teachers and lecturers from the 2nd cycle, artists and theorists. It aims to develop the themes addressed by the different ARCs when their defined fields of research are clearly an integral part of the school's academic project : stories / fictions / imaginary worlds that foreshadow, through the research project, a 3rd cycle under construction.
